

## Concrete Compressive Strength Data Set

Data Set Characteristics: Multivariate

Number of Instances: 1030

Attribute Characteristics: Real

Number of Attributes: 8

### Instructions :

1. Read the data using any suitable command in matlab.
2. The dataset consist of 8 attributes (features ) and 1 Target variable (last coloumn)
3. The target variables is Concrete compressive strength
4. Use 70:10:20 ratio for dividing dataset into Training, Validation and Test datasets, respectively
5. Please look at this following link for further information :
